

The NEW QD3

Dazzling Multi Image Shows are now totally automatic with AVL's Computerized Playback Module

Your audience files in.

The room's doors close quietly, the lights dim gradually, the curtains part to reveal the screen. All automatically.

Your show begins. Powerful and persuasive multi-image wizardry fills the screen, reinforced by dramatic special effects. All automatically.

Your message ends. Room lights brighten as the curtains close and doors open. Projector trays return to their starting positions, ready to resume. Ready for your next audience. All simply. And automatically.

Because you're using the QD 3... economical, easy-to-operate playback magic from AVL.

- **Modular**

The QD 3 receives instructions from a tape deck program track and controls three projectors plus peripherals. It's the ideal playback unit for single-screen shows, or you can use it combined with additional QD 3s for big multi-image shows. (Up to five QD 3s can operate from the same program track).

- **Fascinating Screen Effects**

Twenty dissolve effects plus animation, superimposition, flash fades. The QD 3 is a playback system that packs all the power of our All New SHOW PRO V computerized programmer.

- **New Speed**

Up to 20 visuals per second! Action so fast it dazzles, or so satin-smooth you won't believe you're watching slides.

- **Perfect Light Control**

The QD 3 can control the intensity of projector lamps or room lights. Dim, brighten or hold either to enhance your presentation.

- **Special Effects**

Two built-in auxiliary channels for control of special effects peripherals... movie projectors, room lights, doors, curtains, rotating mirrored globes, even fog machines.

- **True Tray-Switched Homing**

The QD 3 automatically re-synchronizes slide trays at the end of a show even if power fluctuations or malfunctions have caused slide skipping. It also has electronically counted homing, eliminating tray switches, to improve portability.

- **Self-Monitoring**

The QD 3 automatically detects and identifies lamp burn-out and other system problems.

- **Remote Fault Indicator**

When a system component fails, the QD 3 signals the fault to a remote location. In addition, it indicates when all trays are home.

- **Portable**

The QD 3 is light (10 pounds) and compact. Fits with projectors in travelling case.

- **Provides Own Back-Up**

Because each QD 3 is a complete system, they are interchangeable. So a single extra unit provides very economical back-up.

- **Also Available... the QD 2**

Two-projector control for smaller shows. Single auxiliary channel.

Simplicity and Dependability

The QD 3 is designed for simplicity, and computer-perfect multi-image playback.

We've made it remarkably easy to understand... to set up... to use.

So the novice can always look like a pro... and the pro can always depend on results.
